

Data Cleaning & Preparation - Change Log

Project 1 | DecodeLabs Industrial Training Kit | Batch 2026

Dataset Overview

Source file: Dataset_for_Data_Analytics.xlsx | 1,200 order records | 14 columns (OrderID, Date, CustomerID, Product, Quantity, UnitPrice, ShippingAddress, PaymentMethod, OrderStatus, TrackingNumber, ItemsInCart, CouponCode, ReferralSource, TotalPrice).

Summary

A full integrity audit was run against the three checks required for Project 1: missing values, duplicate records, and formatting consistency (dates, numbers, text). The dataset was found to be largely clean; one genuine missing-value pattern and one numeric precision issue were identified and corrected. Final output passes the Project 2 verification gate: 0% duplicate unique identifiers, 0% incorrectly formatted dates.

Change Log

Change ID	Description	Finding / Impact	Resolution
CR001	Duplicate audit	Found 0 duplicate rows, 0 duplicate OrderIDs, 0 duplicate TrackingNumbers.	No action needed - already unique
CR002	Missing value audit	Only CouponCode had missing values: 309 of 1200 rows (25.8%).	Filled with 'No Coupon' (missing = no coupon applied at checkout, not a data error)
CR003	Text formatting	0 values required trimming.	Standardized - no visible issue found, applied as safeguard
CR004	Numeric precision	29 values had floating-point precision artifacts (e.g. 769.3799999999999).	Rounded to 2 decimal places
CR005	Date formatting	All 1200 dates converted to a single consistent format.	Standardized to ISO 8601
CR006	Formula verification	0 rows did not match the expected calculation.	Verified - all rows consistent

Verification Gate Results

Check	Requirement	Result
-------	-------------	--------

Duplicate unique identifiers (OrderID / TrackingNumber)	0% error rate	PASS - 0 duplicates found
Date format consistency	0% error rate (ISO 8601)	PASS - all 1,200 dates standardized
Missing values	Identified and resolved	PASS - CouponCode nulls resolved
Numeric precision (currency)	2 decimal places	PASS - 29 values corrected

Prepared as part of Project 1 (Data Cleaning & Preparation) deliverables, DecodeLabs Data Analytics Industrial Training Kit, Batch 2026.
